VAPESTICS

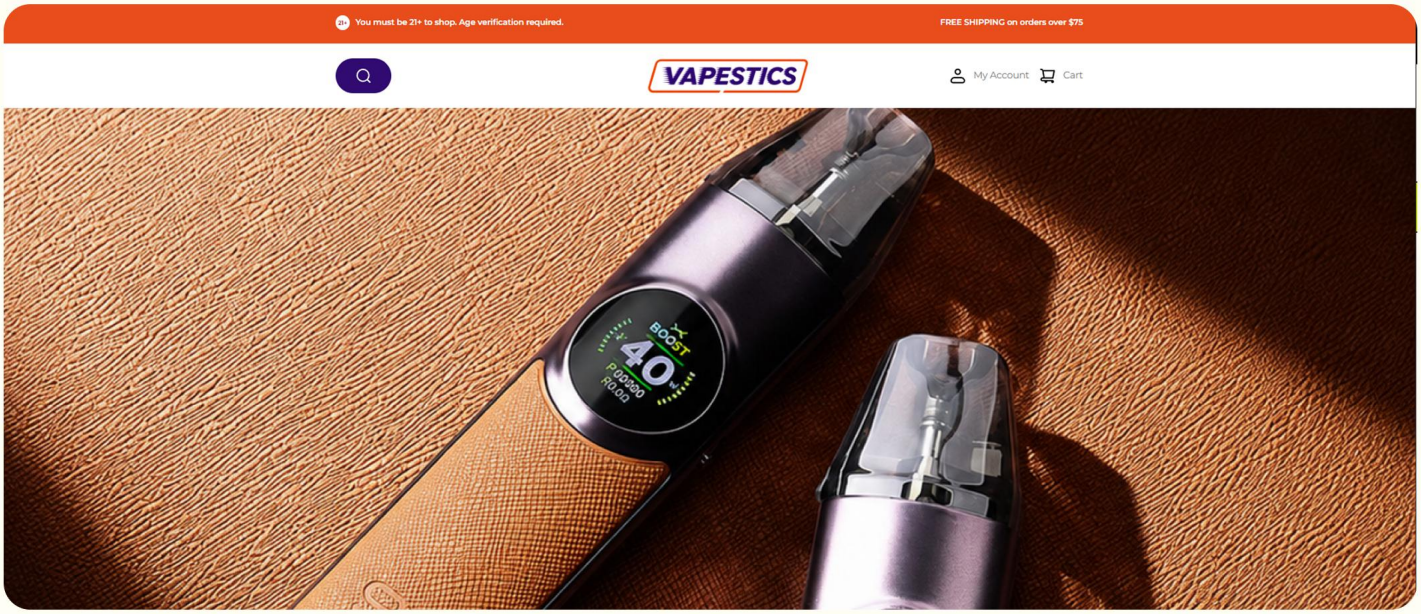

Creating a Modern Ecommerce Interface for a Large Vape Catalog

Service: UI/UX & E-commerce Design
Industry: Online Vape Retail
Project: Vapestics

The Challenge

Vapestics required an E-commerce experience capable of presenting several major product categories including disposable vapes, hardware, E-liquid, accessories, nicotine pouches, and nicotine salts without overwhelming customers.

The design also had to accommodate age-restricted E-commerce requirements while keeping product discovery straight forward.

Our Design Approach

We designed the storefront around clear category segmentation and repeated product discovery opportunities.

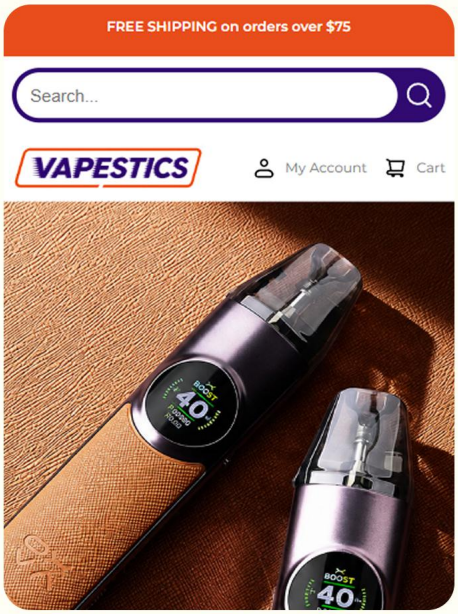

The interface was built around:

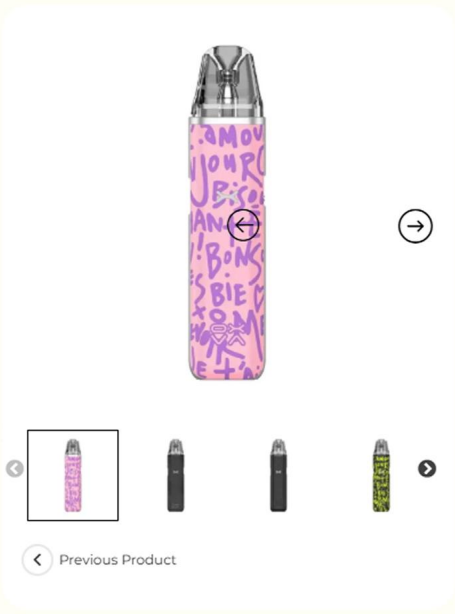

- Prominent age-restricted messaging
- Search and account access
- Category-led shopping
- New arrival merchandising
- Dedicated product sections
- Consistent product-card structure
- Product pricing and add-to-cart actions
- Blog and educational content integration
- Responsive mobile layouts

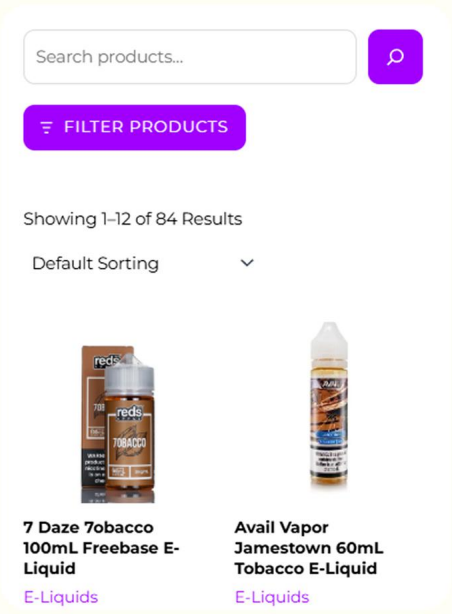

The current storefront demonstrates this multi category architecture with New Arrivals followed by dedicated sections for Disposable Vapes, Hardware, E-Liquid, Accessories, Nicotine Pouches, and Nicotine Salt. It also incorporates an age gate and E-commerce support content.

The Outcome

The design transformed a potentially complex inventory structure into a more understandable ecommerce journey. Customers can identify the category they want, compare products, and proceed toward purchase without navigating through unnecessary layers The visual system was designed to remain scalable as additional products, collections, and editorial content are introduced.

A scalable E-commerce design system built around product discovery.
