

Building Search Visibility Around High Intent Product Categories

Service: E-commerce SEO
Project: STRIO

The SEO Challenge

STRIO competes in an organic search environment where high intent terms around vape hardware and 510-thread batteries are highly competitive.

A major opportunity was to expand organic discovery beyond branded searches and connect product, collection, and educational pages around commercially relevant topics.

Our SEO Strategy

The campaign focused on strengthening the relationship between product discovery and informational search intent.

Work included:

- Keyword research
- Collection page optimization
- Product page optimization
- Search focused page titles
- Product description expansion
- Internal linking
- Blog content development
- Technical SEO reviews
- Indexation improvements
- Content clustering around major product categories

STRIO currently has a dedicated 510 Batteries collection supported by detailed product pages and educational content such as its guide to using a 510-thread battery.

SEO Outcome

The project established a broader organic search footprint across commercial product pages, collection pages, and informational content rather than relying exclusively on brand searches.
