

Growing Search Coverage Through E-commerce and Product-Led Content

Service: E-commerce SEO & Content Strategy
Project: Discover Vapes

The SEO Challenge

Discover Vapes needed organic search visibility in a highly competitive industry where product searches, comparison queries and educational searches can all contribute to customer acquisition.

A catalog alone would not create enough search visibility.

Our SEO Strategy

The campaign connected transactional E-commerce pages with supporting search focused content.

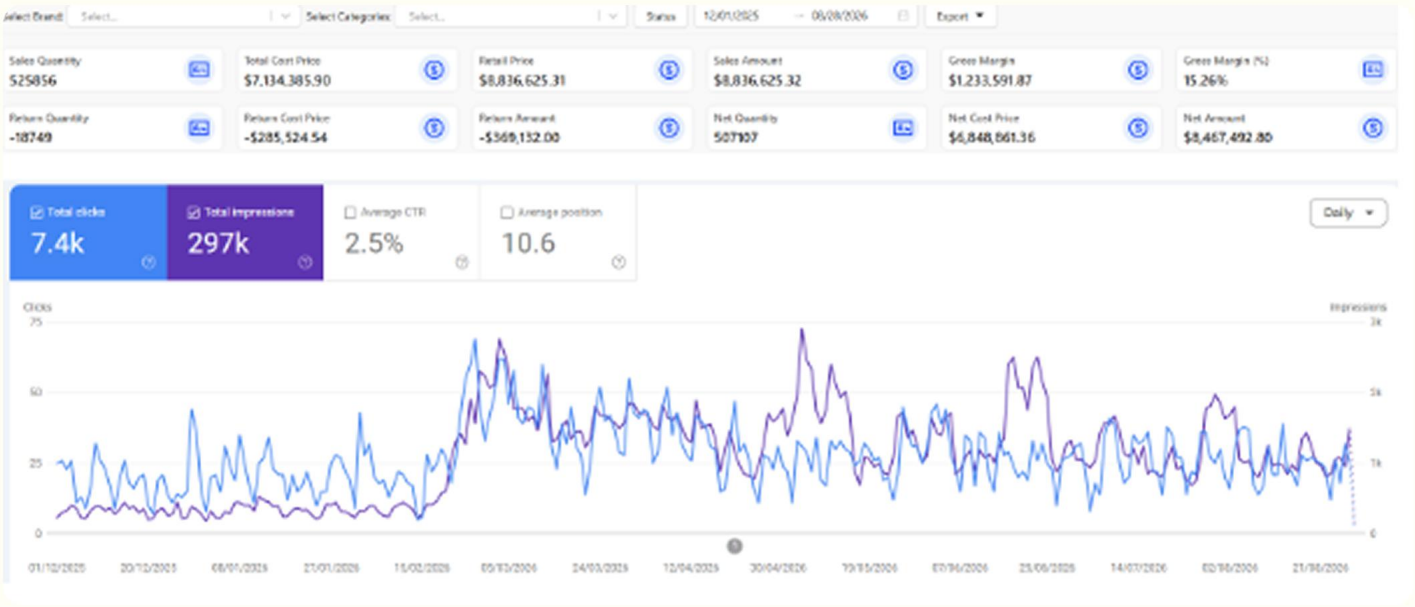

Work included:

- Keyword mapping
- Product page optimization
- Category page optimization
- Technical SEO
- Metadata optimization
- Internal linking
- Product content expansion
- Search focused articles
- FAQs
- Search intent targeting
- Crawl/indexation improvements

Discover Vapes currently maintains optimized product information alongside a growing article library containing device reviews and search-focused product guides. Its blog includes content covering products from SMOK, Vaporesso, GeekVape, Geek Bar and Fifty Bar.

SEO Outcome

The strategy created multiple organic entry points across product, category and informational searches instead of leaving the website dependent on homepage or branded visibility alone.
